

Ligjerata 10a

Avulli i ngopur dhe i pangopur

$$H_2O \rightarrow t = 100^\circ C$$

$$p = 101325 Pa$$

$$\left. \begin{array}{l} \text{Himaloide} \\ p_{at} < p_{ad} \end{array} \right\} t = 70^\circ C$$

Lagështia e ajrit

$a \rightarrow$ lagështia absolute të ajrit

$$a = \frac{m_u}{V} \rightarrow \text{masen e avullit të ujit në ajër} \quad [=] \frac{kg}{m^3}$$

$$pV = nRT \quad n = \frac{m_u}{M}$$

$$pV = \frac{m_u RT}{M} \quad / \cdot \frac{M}{RT}$$

$$\frac{pM}{RT} \cdot V = m_u / : V \Rightarrow \frac{m_u}{V} = \frac{pM}{RT}$$

$$a = \frac{m_u}{V} = \frac{pM}{RT}$$

$$a = \frac{pM}{RT}$$

Lagështia maksimale a ajrit

$p = p \rightarrow$ shtypjen e avullit të ngopur.

$$A = \frac{pM}{RT}$$
