Lëvizje e njëtrajtshme drejtvizore

$$\vec{v} = konst.$$

$$v = \frac{ds}{dt} / \cdot dt$$

$$ds = v dt / \int$$

$$\int ds = v \int dt$$

$$s = vt + C, \quad C \rightarrow \text{konstanta e integrimi}$$

$$t=0, \quad s=0$$

$$0 = v \cdot 0 + C \rightarrow C = 0$$

$$s = vt \rightarrow v = \frac{s}{t}$$

$$[s] = m$$

$$\int_0^s ds = v \int_0^t dt$$

$$s / \int_0^s = v \quad t / \int_0^t$$

$$s = vt$$

$$\omega = konst$$

$$\omega = \frac{d\varphi}{dt} / \cdot dt$$

$$d\varphi = \omega dt / \int$$

$$\int_0^\varphi d\varphi = \omega \int_0^t dt \Rightarrow \varphi = \omega t \text{ ose}$$

$$\vec{\varphi} = \vec{\omega} t$$

$$\varphi = 2\pi$$

$$t = T$$

$$2\pi = \omega T \Rightarrow \omega = \frac{2\pi}{T}$$

$$v = \frac{p}{T} = \frac{2\pi r}{T} = \omega \cdot r$$

$$v = \omega \cdot r \quad [=] \quad \frac{rad}{s} \cdot m \quad [=] \quad \frac{m}{s}$$

$$\varphi = \frac{l}{r} \quad [=] \quad \frac{1m}{1m} = 1rad$$
