Forca e fërkimit

$$F_f = \mu N$$

$N \rightarrow$ intensiteti i forcës normale në rrashin e fërkimit

$\mu \rightarrow$ koeficienti i fërkimit.

$$\mu_s = \frac{F_0}{N} \rightarrow \text{forca aktide}$$

$\rightarrow$ koeficienti statik i fërkimit

$$\mu_d = \frac{F}{N}$$

$$F < F_0$$

$$\mu_s > \mu_d$$

$\rightarrow$ koeficienti dinamik i fërkimit

$$F_f = \mu g \sin \varphi$$

$$N = \mu g \cos \varphi$$

$$\mu = \frac{F_f}{N} = \frac{\mu g \sin \varphi}{\mu g \cos \varphi} = \tan \varphi$$

$$\boxed{\mu = \tan \varphi}$$
